

Covid19-Cases

UI/UX - SwiftUI

Live Covid19 cases Update.

Data is being fetched from a Rest API.

The data is in JSON format.

Weather-App

UI/UX - UIKit

Live Weather Updates.

Data is being fetched from openweathermap API.

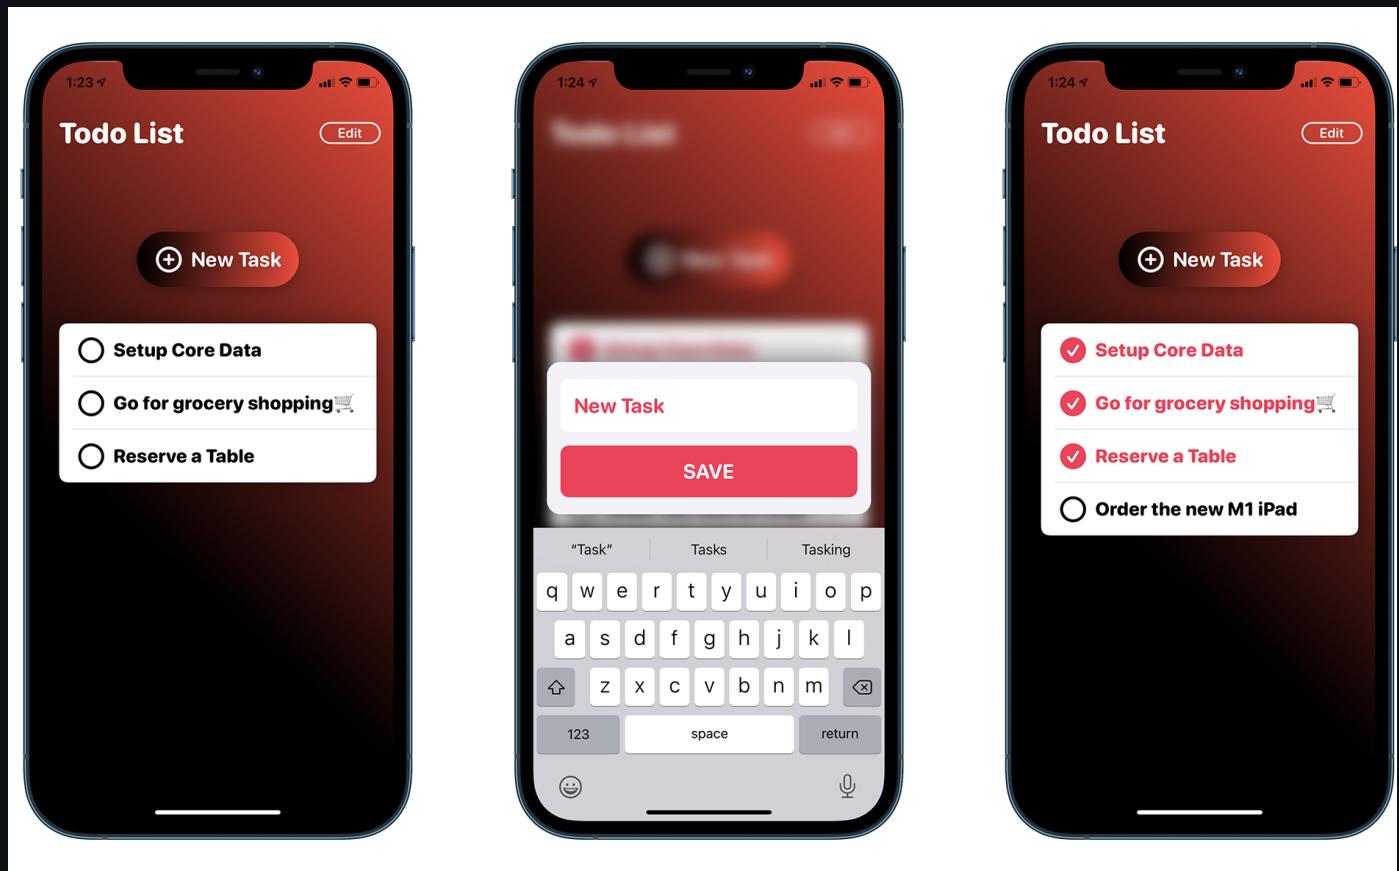

CoreLocation is used to fetch the current location of the User.

TODO-App

UI/UX - SwiftUI

CoreData is used to manage the Todo List items.

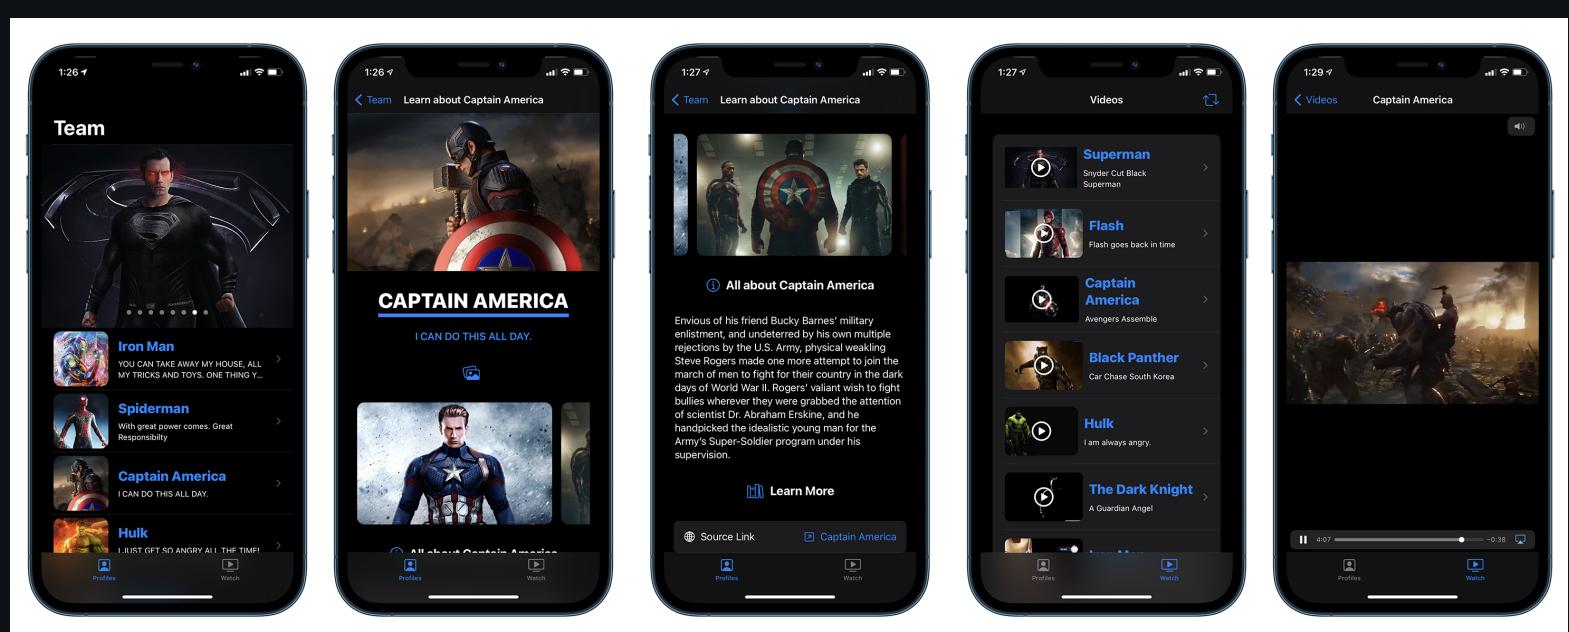

Superheroes

UI/UX - SwiftUI

An app just to showcase my favorite superheroes and their best movie scenes.

Data is being fetched from a local JSON file.

AVKit is used to play videos in the App.

Covid19-Cases

I am currently working on this app as this is my final year project.
This app is only about 40% complete.

An app for the local law enforcement to capture and store digital evidence on the device.
The person using the app can give notes on stored evidence.
Audit Trail is being maintained of all the activity and evidence capture using date & time.

CoreData is using one-to-many relationships to manage the data.
I am using Documents directory to store files like videos and photos. And then storing the link(URL) of the saved media in documents directory in CoreData with other information.

App displays a list of captured Evidence within a specific case container Using PHPicker which was introduced in iOS 14 to select photos and videos from the library.
Using AVkit to play Videos.
